Our Story

Go Green was formed in 2000 by a number of key professionals in the waste management industry. We offer a complete waste management and recycling solution, servicing a variety of industries across Ireland. Throughout our years of operation, Go Green have advanced our professional knowledge and acute understanding of the waste industry.

This has enabled us to share our expertise with our customers, regardless of the complexity of a provision. We offer simplified and practical solutions which support a variety of businesses; this is managed by utilising our customer focused teams both in the office and on site.

Under the guidance of our highly experienced directors, Go Green Ltd has developed into a market leading waste management facilitator. We believe that our pursuit of excellence combined with our long-term future objectives sets us apart from our competitors.

OUR
SERVICES

Consolidated Waste Solutions

Go Green’s vast range of services are available for our customers, no matter what they require. The flexible service we offer means that as your needs change, our provision changes with you. We have spent the last 20 years developing our extensive waste container selection, along with services like soil testing and aggregate supply, to ensure we have the right option for you.

Our bespoke service offering provides our customers with the ability to tailor their waste management service to fit in with them, as it should be.

OUR SECTORS

Operating in Multiple Industries

Every sector has its own requirements, elements that can only be understood by suppliers who have had experience in them. Go Green have the benefit of a wide portfolio of customers, operating across a variety of different industries and sectors, which enables us to carry out efficient and customised service regardless of the sector background.

For every sector, there is a different innovation that allows Go Green to utilise our sustainable approach to waste management and recycling. We continue to grow our supply chain partners who can offer environmentally positive reuse and disposal options for each sector.

INNOVATION

COMMITTED TO BESPOKE TECHNOLOGY

Portal. Technology designed to make reporting simple

To give our customers the management and ownership they want of their waste data, Go Green developed a bespoke online portal housing customer waste data, reporting tools and Duty of Care documentation.

Whether its waste breakdowns, recycling statistics, or compliance packs for site, the portal offers everything in one centralised place. Feedback received from our customer base contributed to its design, usability and efficiency. Dependant on your needs, the portal has something to suit your waste management requirements.

API's. Real-time information, whatever your platform

Our operational management software is constantly evolving, so we have integrated into various APIs to enhance our system capability, and automate key business processes. This allows us to push data into customer systems in real-time, providing them with key information or reports as they become available. Through our integrations, customers have saved precious time and money, whilst making their operations run efficiently.

If you're in need of seamless integration, real time notification and adaptable use, Go Green's technology will be a great fit for your business.

SUSTAINABILITY

PROTECTING FUTURE GENERATIONS

Social Value

Working with our customers provides an opportunity to deliver social value through a collaborative approach, and create impactful changes. Meeting the needs of varied communities is a mission best shared; Go Green work in partnership with our clients to identify ways to support people in the communities we work within through community initiatives, and cooperative growth.

Go Green believe economic sustainability holds equal importance to environmental and social purpose. That is why we champion local spend and support our SME supply chain not only with established relationships, but also with modern slavery checks and training.

We believe in showing the impact of all social value we carry out. Alongside reporting the social value we deliver, we also create case studies outlining the work we, and our clients carry out together and the positive impacts we have created within local communities.

Environment

Tackling climate change is the biggest challenge to face humankind and we can all contribute towards the effort; that’s why Go Green are committed to reaching Net Zero by 2030, whilst becoming carbon neutral from 2022. All of which will be monitored and measured throughout our Road Map to Net Zero plan.

We’re setting an example in-house by investing in sustainable infrastructure throughout our head office, with solar panels to generate our own electric, and the use of recycled materials, like reclaimed bricks. We have also included fittings like auto-ambient lighting and underfloor heating to support our carbon reduction strategy.

Our team are aware of the drive towards a greener, more sustainable future, through our in-house Environmental Training being delivered to all our employees. Go Green accreditations speak volumes, that’s why we are an accredited ISO 14001 company along with our Gold membership to the Supply Chain Sustainability School.

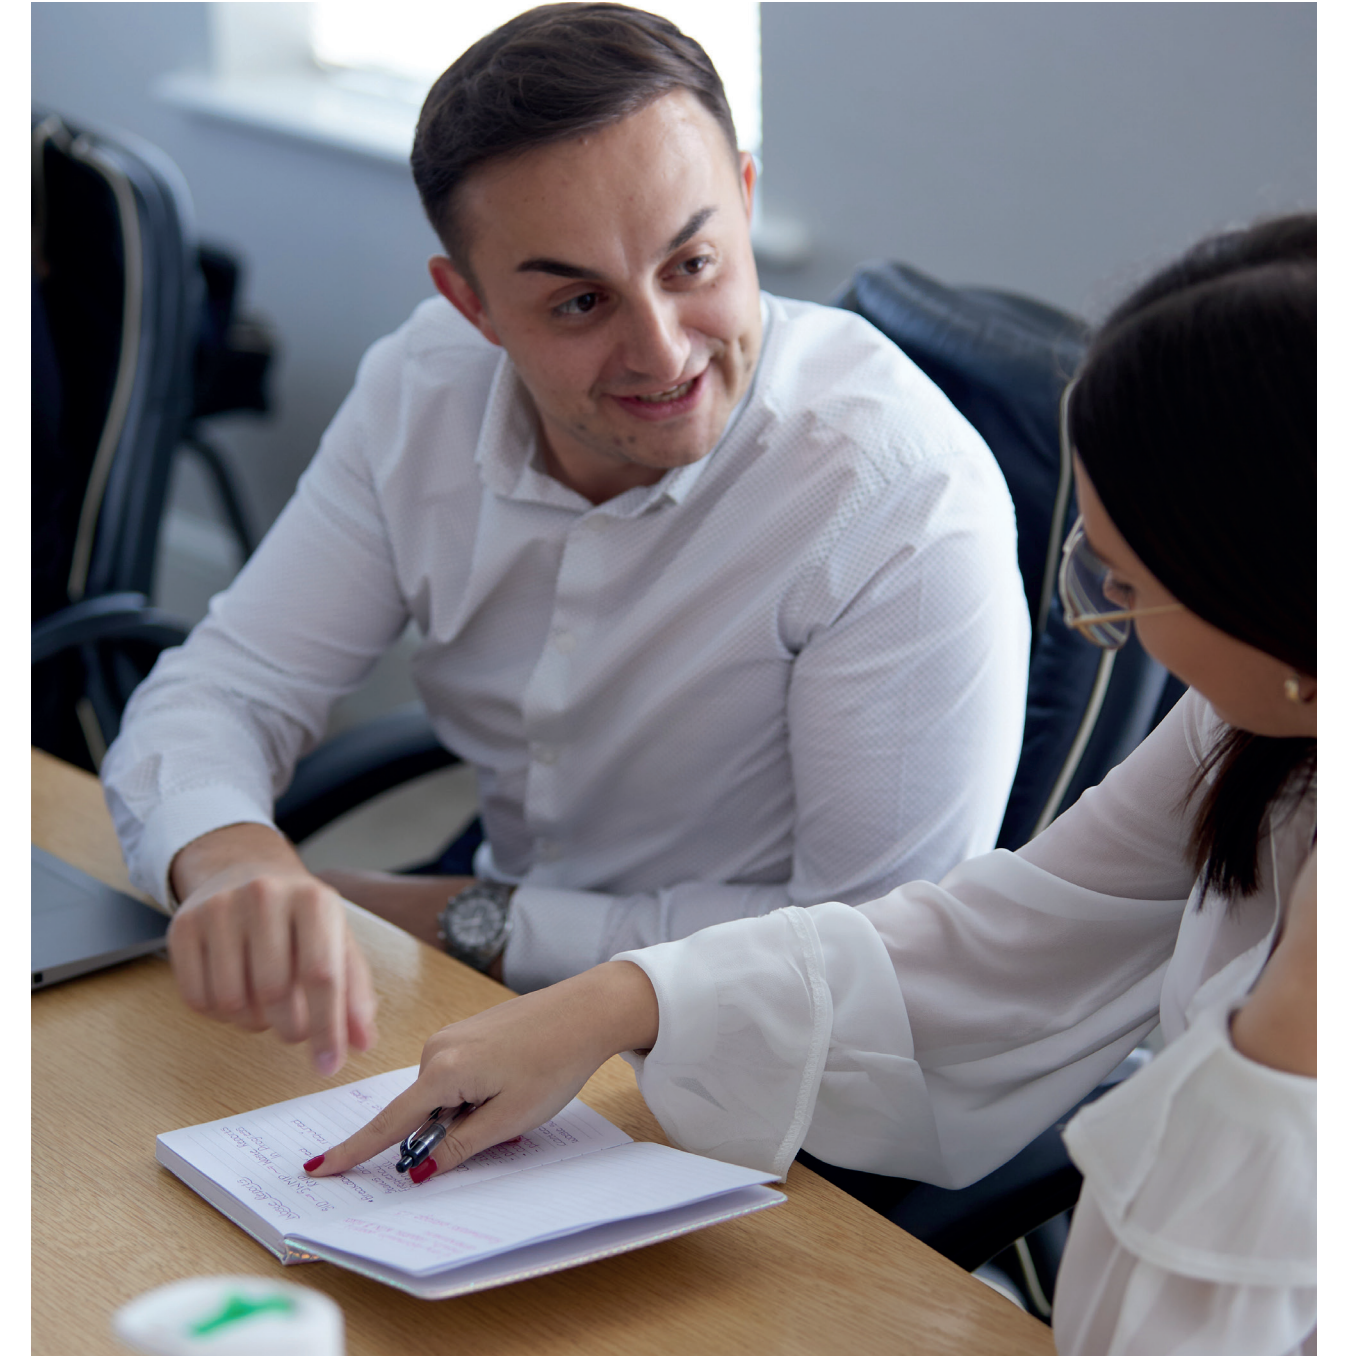

SUPPLY CHAIN

Supplier Compliance

With our customer's compliance at the forefront of our delivered services, it's vital that we pay close attention to the 250+ suppliers in our database. Our robust supplier approval process ensures our customers receive quality service in line with current legislation and best practice.

From site visits, to EPA checks, compliance packs to waste tickets, Go Green manage the whole process and collate the information into our online customer portal for ease of access. By logging into the portal, all supplier licences and insurances can be viewed and downloaded when necessary.

Suppliers are categorised based on their service, recycling rates, audit trails and weight breakdowns; suppliers are then matched to customers based on the requirements of the job.

AND ACCREDITATIONS

Demonstrating our capabilities

Go Green have a number of memberships, accreditations and certifications, including ISO 9001 and 14001.

Our fully integrated management system allows us to support our customers, ensuring the service we provide is of the highest standard. Our customers audit our premises on a regular basis, and are always impressed with our stance on sustainability within our offices.

Go Green firmly believe that these memberships, like Supply Chain Sustainability School, and certifications including: Constructionline, Safecontractor and Cyber Essentials, are a clear demonstration of our waste management capabilities. We provide our customers with the reassurance that we will deliver an efficient and professional service throughout Ireland.

THE BENEFITS
